Isla del Coco

The island was discovered in 1526 by Captain Joan Cabezas and was named by Nicholas Desliens in 1556. It is located 532Km south-west of Cabo Blanco in Costa Rica which is supposedly the model of Isla Nublar in Jurassic Park. The area is rocky. The coast is very irregular and has cliffs of up to 183m of height, plenty of underwater caves and 200 dramatic waterfalls, many of which fall into the sea. The sea is light blue and extremely clear. White-tipped fin sharks, giant hammerhead sharks, tuna, parrotfish, mantas, and crevelle jacks are abundant in the water around island.

Our sincere appreciation : Control Nacional de Radio, Parques Nacionales, Area de Conservacion Marina Isla del Coco, Carlos Diez (TI5KD), Adventist World Radio, Ricardo Mendieta (TI2MEN), Dr Rogelio Pardo, Sea Hunter, NASDX Fund, National Capital DX Association, Crews : Hector, Gilberto, Park Rangers : Freddy, Marco, Diego, Walter & others, and Yaesu Musen Co., Ltd.
